

**CLAIM AMENDMENTS:**

1. (currently amended) A dial lock for a traveling bag, ~~wherein a means for rotating a bolt of the dial lock between a locking position and unlocking position of a lock is provided in addition to a function of the dial lock,~~ comprising:

a dial lock mechanism including a bolt rotatable between a locking position and an unlocking position, and a plurality of dials mounted through spacers on said bolt;

an operation section for permitting said bolt to be rotated by a common key;

said operation section including a rotatable key hole plate provided with a key hole for a common key, and a stationary support plate rotatably supporting said rotatable key hole plate and having a colored area;

said rotatable key hole plate being cut off at opposite ends in a radial direction to form a substantial oval-like configuration;

said bolt being provided on an end with a pressing portion;

when said common key is inserted into said key hole and said pressing portion of said bolt is actuated, said bolt being rotated between said locking position and said unlocking position, and when said bolt is in said unlocking position, said colored area of said stationary support plate being exposed through cutoff ends of said rotatable key hole plate.

2. (cancelled).

3. (cancelled).
